CAG Document Translation Workflow — Rajbhasha Section

CONTENTS

1. Roles & Responsibilities
2. Workflow Overview
3. Step 1 — Upload / Receive Document (Admin)
4. Step 2 — Review & Assign Batches (SAO)
5. Step 3 — Translate Batches (Translator)
6. Step 4 — Formatting Review (DEO)
7. Step 5 — Vetting & Batch Approval (SAO)
8. Step 6 — Compilation Review (DEO)
9. Step 7 — Final Approval & Dispatch (SAO)

1

Roles & Responsibilities

Role	Who	Responsibilities in this workflow
Super Admin	IT / System Administrator	Full platform access. Manages all users, system settings, and configurations.
Admin	Reception / Intake officer	As Uploader: Registers and uploads documents for translation. As Admin: Views KPI dashboard and full document list; manages users and glossary.
SAO	Section Officer / Senior Accounts Officer	As Vetter: Reviews uploaded documents; splits into batches; assigns translators; approves or returns translated batches. As Approver: Performs final vetting, gives sign-off, and dispatches the completed document.
Translator	Translation officer	Translates assigned batches in the Workbench and submits them.
DEO	Data Entry Operator	As Formatting Reviewer: Reviews translated batches for formatting compliance. As Compiler: Merges all SAO-approved batches into a single bilingual DOCX.

2 Workflow Overview

Documents move through the following stages in order. Each stage is role-gated — you will only see screens relevant to your role.

At vetting stages, a batch or document may be **rejected / returned for rework**. The relevant officer must correct and resubmit before the workflow continues.

3 Step 1 — Upload / Receive Document

Admin

When a document arrives for translation, the Admin registers it on the platform.

1 Navigate to "Receive New Document"

After logging in, click **Receive New Document** in the left sidebar. The page title reads *"Rajbhasha intake register — DOCX only"*.

2 Attach the DOCX file

Click the upload area and select the document. Only **.docx files** are accepted. Convert scanned PDFs or older .doc files to .docx before uploading.

3 Fill in the intake form

Field	What to enter
Subject	Auto-filled from filename — edit to be more descriptive if needed.
Sender Email	Email of the person / department sending the document.
Language Pair	English → Hindi or Hindi → English.
Department	Select the originating department from the dropdown.
Priority	Routine / Priority / Immediate.

4 Click "Register Document"

A success message confirms *"Document received into Rajbhasha Section"* and you are redirected to the document overview. Status is now **Received**.

4 Step 2 — Review & Assign Batches

SAO

The SAO reviews the uploaded document, optionally runs machine translation, then splits it into batches and assigns each batch to a translator.

1 Open the document from the Documents list

Log in as SAO and go to **Documents** in the sidebar. New documents appear with status *"Received"*. Click a document to open its detail page.

2 Run Bhashini Auto-Translation (Overview tab)

On the **Overview** tab, review the document metadata (subject, department, language pair, priority). A **Bhashini Auto-Translation** card is visible — click [Translate with Bhashini](#) to machine-translate the full document automatically.

This step is **optional**. Running Bhashini translation provides translators with a machine-translated starting point, which can speed up their work.

3 Go to the "Split & Assign" tab

Click the **Split & Assign** tab. The tab header reads *"Divide into batches and assign to translators"*. Two options are available:

Option A — Auto-assign (recommended): Click the [⚡ Auto-assign batches](#) button (top right). The system automatically splits the document into batches and assigns available translators. A summary table shows the created batches with page ranges and assigned translators.

4 Or create batches manually

To create batches yourself, click [+ Add batch](#) (below the "Or create manually" divider). For each batch fill in:

Field	What to enter
Batch label	e.g. <i>Batch 1</i>
Page range	e.g. <i>1–15</i> . A coverage bar shows how many of the total pages are assigned.
Translator	Select an officer from the dropdown.

Repeat for each batch. The **page coverage bar** turns green when all pages are accounted for. When done, click [Save batches](#) to confirm.

Every page must be covered before saving. The system will not allow saving if any pages are unassigned or if the total exceeds the document length.

5 Step 3 — Translate Batches

Translator

Each assigned batch appears in the Translator's task list. The Translator works in the Workbench and submits the completed batch.

1 Open a pending task from the Documents page

Log in as Translator. The **Documents** page shows pending task cards with the document name and batch number. Click a task to open it in the Workbench.

2 Translate segment by segment in the Workbench

The Workbench shows the original text on the left and the translation editor on the right. Machine translation suggestions may be pre-filled — accept, edit, or replace as needed.

When a **Glossary** suggestion appears, click it to insert the approved translation. Terms marked **"Most Used"** are the most frequently accepted — prefer these for consistency.

3 Submit the completed batch

Click **Submit**. The batch status changes to *Submitted* and moves to the Formatting Review queue automatically.

6 Step 4 — Formatting Review

DEO

After a batch is submitted by the translator, the DEO reviews and corrects its formatting directly in the browser before it goes to the SAO for vetting.

1 Open the Formatting Queue

Log in as DEO. Click **Formatting Queue** in the sidebar. The queue lists all pending batches showing the document title, batch number, and date. Click a batch card to open it.

2 Edit the document inline

The batch opens in a full-screen inline document editor — the translated DOCX is loaded directly in the browser. The document title, batch number, and *"Formatting Review"* label are shown in the header.

Review and correct formatting issues directly in the editor: font consistency, table alignment, heading styles, numbering, and spacing. There is no need to download or re-upload the file.

3 Submit the formatting review

Once corrections are done, click **Submit Formatting Review** in the top header bar. The system exports your edits and submits them automatically. A confirmation reads *"Formatting review submitted"* and you are returned to the Formatting Queue. The batch moves to the Vetting Queue.

7 Step 5 — Vetting & Batch Approval

SAO

The SAO reviews each translated batch for quality and either approves it or returns it for rework.

1 Open the Vetting Queue

Log in as SAO. Click **Vetting Queue** in the sidebar. The left panel lists all documents with pending batches. Each document shows a progress bar (approved / total) and an amber "X pending" badge. Click a document to expand its batch list, then click a batch to open the review panel on the right.

2 Review the batch in the three-panel view

The review panel shows the batch content across up to three columns side by side:

Panel	Content
Original (left)	The source document text (English or Hindi).
Machine Translated (centre)	Bhashini MT output — shown only if machine translation was run. Header is highlighted in orange.
Translated (right)	The translator's final version after formatting review. Header is highlighted in blue.

3 Use review tools in the toolbar

The panel toolbar offers additional tools to aid review:

Button	What it does
Highlight Differences	Compares the Machine Translated and Translator's versions, highlighting words that differ. Click again to clear.
Word Differences	Opens a modal table showing every word that differs between MT and the translator's version, side by side. Available only after Highlight Differences is active.
Review Suggested Glossary	Opens a glossary review panel showing terms the system has flagged for this batch. The button shows a count badge (e.g. 3). Only appears if there are suggestions.

4 Approve the batch or return for rework

At the bottom of the panel, a **comment field** and two action buttons are shown:

— Click **Approve batch** if the translation is acceptable. A comment is optional.

— Click **Return for rework** to send it back to the translator. A **comment is required** — the system will block submission without one. The translator is notified and the batch is returned.

Once actioned, the batch shows a green "Batch approved" or red "Returned for rework" banner with the comment.

All batches must be approved before the document can proceed to Compilation. One returned batch holds up the entire document.

Once all batches are SAO-approved the system merges them into a single compiled document. The DEO opens it in the Compiler Workbench, reviews it, makes any final edits, and submits it for final vetting.

- 1

Open the Compilation Queue

Log in as DEO. Click **Compilation Queue** in the sidebar. The page subtitle reads *"Full documents awaiting compilation review"*. Each card shows the document title, date, and a *"Compilation Review"* label. Click a card to open the Compiler Workbench.
- 2

Review the compiled document (Overview tab)

The Compiler Workbench opens with the header showing the document title and *"Full document · Compilation Review"*. Two tabs are available in the header: **Overview** and **Edit**.

The **Overview** tab (default) shows a **read-only preview** of the fully compiled translated document. Scroll through to check the overall quality, layout, and that all batches have merged correctly.
- 3

Edit if needed (Edit tab)

If corrections are required, click the **Edit** tab. The document opens in a full inline editor (same as the Formatting Review workbench). Make any final corrections to formatting, spacing, or text directly in the editor.
- 4

Submit for Final Vetting

When satisfied, click **Submit for Final Vetting** in the top-right of the header. The system saves your edits (if any) and submits the compiled document. A success message reads *"Compilation review submitted for final vetting"* and you are returned to the Documents page. The document now moves to the SAO's Dispatch Queue (Step 7).

9

Step 7 — Final Approval & Dispatch

SAO

After the DEO submits the compilation, the SAO receives a task in the Dispatch Queue. The SAO reviews both the original and translated documents side by side, then either rejects or approves and dispatches to the requester.

- 1

Open the task from the Dispatch Queue

Log in as SAO. Click **Dispatch Queue** in the sidebar. The queue shows pending tasks — look for a task badged *"FINAL VETTING"* with the description *"Final Vetting — Review completed translation before dispatch"*. Click it to open the Final Vetting view.
- 2

Review the two-panel document view

The page shows the document title and subtitle *"Final Vetting — Review before dispatch"*. The main area is split into two panels side by side:

Panel	Content
Original Document (left)	The source document as uploaded by the Admin.
Translated Document · हिन्दी (right)	The DEO's final compiled and reviewed translation.

Scroll through both panels to compare the original and translated content for quality, accuracy, and completeness before taking action.

3

Reject if corrections are needed

Two action buttons are shown at the **bottom** of the page. Click **Reject** if the document requires correction. A dialog opens with an optional reason field — describe the issue if needed. Click **Confirm Reject** to send it back. A message reads *"Document rejected"* and you are returned to the Dispatch Queue.

4

Approve & Dispatch to requester

If the document is ready, click **Approve & Dispatch** at the bottom of the page. A dispatch form opens with the following fields:

Field	What to enter
To (Recipient)	Auto-filled from the document's sender email — edit if needed.
CC (Director General — Bhawani Shankar)	Pre-filled with the Director General's email — edit if needed.
Subject	Auto-filled as <i>"Re: [Document Title] — Hindi Translation"</i> — edit if needed.
Signatory	Auto-filled from your account name — edit if needed.

The right side shows a **Covering Letter** editor with two tabs — **English** and **हिन्दी**. Both are pre-filled with standard Rajbhasha Section templates. Edit the text in either language as required.

Attachments (original DOCX and translated DOCX) are listed automatically. Click **Approve & Dispatch** in the form footer to send. A success message reads *"Document approved and dispatched"* and you are returned to the Dispatch Queue.
